Subject Re: System Design/Meeting

Kevin, please accept this e-mail as conditional approval for the landfill design and approval to begin work. The remaining concern of U.S. EPA (Superfund) would be if, after the system is installed and operating, there is still methane leaving the landfill and migrating to the north. This will have to be addressed if the system installed does not effectively remove the methane from areas of concern. US EPA, and MDEQ, would like to request a meeting to discuss the schedule of installation and any remaining concerns with the project. Please respond with a suggested meeting date and time. US EPA is not available until July 13th due to deployment to the All-Star game. Thank you in advance.

Subject System Design/Meeting

Jeff/Ben: We were wondering what is the status for the approval of the system design? We would like to meet in the next week or so to hash out any details and to have a general site update meeting so that all parties are on the same page, and so we can move forward with the system installation. We have received approval for the air permit for the new system and flare. Thanks.
